

Sean Myk Daniel Jacinto

FULL-STACK DEVELOPER, TEAM LEAD & AI AUTOMATION SPECIALIST

seanmykjacinto17@gmail.com · Philippines · PHT (UTC+8) · seanjacinto.com

PROFESSIONAL SUMMARY

Sean Myk Daniel Jacinto is a Full-Stack Developer and AI Automation Specialist based in the Philippines. He builds complete digital products, from database schema to polished UI, and integrates AI to make them smarter and faster. At EdgeFlow, he architected a suite of production care and social impact management platforms used daily across multiple UK Vista brands. At FameGrowth, he shipped client SaaS including EstateMatch, a German real estate investment analysis platform powered by Claude AI. He also leads the Rally's Transfers development team, coordinating four developers building a full-stack premium chauffeur platform across Flutter mobile and a Next.js admin portal.

WORK EXPERIENCE

POIAS, Full-Stack Developer

Jun 2026 - Present · Remote

Building and maintaining POIAS, the internal operations platform a poultry processing business runs on daily. It replaced spreadsheet bookkeeping across purchasing, sales, expenses, payments, petty cash, production allocation, commissions, document approvals and reporting. Next.js 16 and React 19 on Supabase Postgres, shipped branch-per-developer with a multi-developer team.

- Designed a generic documents model with typed templates, so Purchase Orders, Invoices, Cash Vouchers and Check Vouchers share one row shape, one template designer and one Draft to Pending to Approved flow
- Built role and permission enforcement in Postgres through Row Level Security rather than in the UI: seven roles plus custom roles, with settings read live so an operator changes access with no migration and no deploy
- Implemented gated approval chains that block billing on unseen vendor invoices and stop a cheque being cut before a bill exists
- Built an imprest petty cash fund with replenishment cycles reconciled against liquidated vouchers
- Cut a production dashboard load from 52 database requests to 32 and its slowest request from 2805ms to 786ms by fixing a shared hook that mounted one auth subscription per consumer
- Maintains a plain-English changelog so any developer can catch up on what changed and why without reading code

Purchasing Sales Expenses Payments Petty Cash Production Allocation Commissions Documents & Approvals Reports

Rally's Transfers, Development Team Lead

Sep 2025 – Present · Remote

Leading a four-person development team building a full-stack premium chauffeur and transport management platform for Rally's Transfers & Tours — an Australian nationwide transport company. The platform spans Flutter mobile apps, a Next.js admin portal, and ~60 Firebase Cloud Functions.

- Coordinates four developers: Haron (admin web), Teng (CRM), Jshade (passenger app), Rap (driver app)
- Overseeing Next.js 15 admin portal with 26+ pages — dispatch, quoting, sub-portals, pricing engine, invoices, RCTI payouts, reports, and CRM
- Architecting ~60 Firebase Cloud Functions: rides, pricing, payouts, RCTI, invoices, flight tracking, and AI email generation
- Integrated FlightAware AeroAPI for live flight tracking, Stripe for payments, and Twilio for driver masked calls
- Shipped AI email composer using Anthropic Claude for campaign drafting
- Provided virtual assistant support alongside the development lead role: managing calendar events and producing marketing infographics

FameGrowth, Full-Stack Developer & AI Automation Specialist

Mar 2025 – Aug 2025 · Remote

Led end-to-end development of client-facing SaaS platforms and internal tools at FameGrowth. Responsible for frontend and backend architecture, database design, AI integration, and client delivery.

- Built EstateMatch — a German real estate investment analysis SaaS with AI exposé extraction, AfA calculation engine, and Claude-powered BUY/HOLD/PASS investment memos
- Developed FameCRM from scratch to replace fragmented third-party tools
- Built AI tools including Trend Finder, AI Cloner, and AI Profile Picture Generator
- Automated sales workflows with Close CRM and OnePage CRM integrations
- Shipped a Birthday Reminder Bot and AI Training Video Hub for internal use
- Managed the full product lifecycle from architecture through deployment
- Provided virtual assistant support to the CEO alongside development work, including setting up monthly tax

AI Profile Picture Generator Birthday Reminder Bot

EdgeFlow, Full-Stack Developer

Nov 2023 – Feb 2025 · Remote

Architected and delivered a suite of production-grade care and social impact management platforms for EdgeFlow's Vista company brands — spanning staff referrals, young people coordination, compliance, finance, and operational workflows across multiple UK-based care organisations.

- Built We Are Vista — a multi-module staff management SaaS: referral intake, young people database, finance, compliance, safeguarding, and maintenance (75+ pages, 85+ custom hooks)
- Built Vista Living — full care coordination platform with real-time Supabase integration and complex permission system
- Built Edge Flow Studio — central admin portal connecting all Vista apps via n8n automation workflows
- Designed a cross-company support ticket system using pg_net triggers ' n8n ingest ' shadow tables ' Realtime sync
- Built and managed ~40 n8n automation workflows for referral processing, compliance, and AI-powered insights
- Implemented dual permission system (PermissionRoute + ProtectedRoute) with role-based access across all Vista frontends

We Are Vista Vista Living Edge Flow Studio Vista Resi Support Ticket System n8n Workflow Suite

Jay (Independent Client), AI Systems Developer (Part-time, concurrent with FameGrowth) 2025 – Jun 2025 · Remote

Contracted to design and build an enterprise AI system that transforms raw training video footage into structured, searchable knowledge — dramatically reducing onboarding time and improving knowledge retention across the organization.

- Built an end-to-end AI pipeline: upload ' transcribe ' summarize ' visual analysis
- Integrated AssemblyAI for accurate speech-to-text transcription
- Used OpenAI to generate structured summaries and learning objectives per video
- Delivered a searchable dashboard giving teams instant access to training content

AI Training Video Hub

Stephanie (Independent Client), Automation Developer (Part-time, concurrent with EdgeFlow) Dec 2024 – Feb 2025 · Remote

Contracted to automate the production of official government meeting minutes — replacing a slow, manual transcription process with an AI-powered service that delivers formatted documents in minutes.

- Automated transcription of government meeting recordings using Deepgram
- Applied OpenAI to format transcripts into official minute templates
- Integrated Google Docs for direct delivery of finalized documents
- Reduced turnaround from hours to under five minutes per meeting

Government Meeting Minutes Service

SELECTED PROJECTS

POIAS POIAS · 2026

A production internal operations platform tracking the full money and paperwork flow of a live-to-dressed poultry business: purchasing, sales, expenses, petty cash, document approvals and role-scoped reporting, enforced at the database layer.

Next.js 16 React 19 Supabase PostgreSQL Row Level Security Zustand

EstateMatch FameGrowth · 2025

A German real estate investment analysis SaaS. Extracts data from PDF exposés using Claude AI, runs an institutional-grade calculation engine (AfA, EKR, Grunderwerbsteuer), and generates German investment memos with BUY/HOLD/PASS verdicts.

Next.js TypeScript Supabase Claude AI Zustand Tailwind CSS

Government Meeting Minutes Service Freelance · 2024

Transcribes government meeting recordings with Deepgram, formats output into official minute templates using OpenAI, and delivers finalized documents within minutes.

n8n Deepgram OpenAI Google Docs

Served Water Served Water · 2025

A full-stack e-commerce and content platform for an Australian premium spring water brand: Stripe checkout, Tiptap blog CMS, Supabase-backed admin dashboard, and a "1 Bottle = 1 Meal" charitable mission baked into the product.

Next.js TypeScript Supabase Stripe Resend Framer Motion

FameCRM FameGrowth · 2024

A fully custom CRM built for FameGrowth centralizing client communications, project tracking, proposal generation, and team workflows in one dashboard.

React Node.js MySQL JavaScript REST API

We Are Vista EdgeFlow · 2024

A multi-module staff management SaaS for EdgeFlow's Vista care brands: referral intake, young people coordination, finance, compliance, safeguarding, and operational workflows in a single platform used daily across multiple UK care organisations.

React TypeScript Supabase n8n shadcn/ui React Query
